Subj: Mother-Daughter Hygiene Program

Dear Sir / Madam,

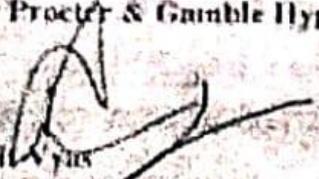

We at Procter & Gamble have been working with young girls in various age groups across the country to understand their needs in the area of Health and Hygiene, Personality development etc, since the past few years. Based on our finding and feedback from you, we have designed programs to educate them on Health & Hygiene subjects. We have been running these programs with the active support of the schools around the country. We have found that these programs have been very useful and have been accepted very well by students, parents and the school authorities across the country.

We have been conducting these hygiene programs for the young girls in your city for many years now. It has been our constant endeavor to help young girls cope with the change they go through at that age in a confident manner, accepting the right hygiene practices. While these national level programs of ours has been appreciated widely, we have found that in order to really make a difference, we need to involve the mothers also, so that they may be aware of better practice and support their daughters in adopting them.

It is for this reason that we are seeking your permission to conduct a hygiene program for mothers and daughter in your school and which will benefit in more adolescent girls learning about the right hygiene practices. The program will have three sessions and will take approximately 1 hour and 30 minutes. (a) Introduction and warm-up session (with bonding games between mothers and daughter) (b) Mothers education session (girls will be engage in a separate activity) (c) Girls education session (our regular education program) along with mothers for support.

We look forward to your support in conducting this unique program.
Sincerely with thanks and regards,

For Procter & Gamble Hygiene and Health Care Limited
